

Bax BH3
Synthetic Peptide
Catalog # SP2291a**Specification**

Bax BH3 - Product Information

Primary Accession	O02703
Other Accession	Q07812
Sequence	NH2-KKLSECLKRIGDELDLDS-COOH

Bax BH3 - Additional Information**Gene ID** 280730**Other Names**

Apoptosis regulator BAX, BAX

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

Bax BH3 - Protein Information**Name** BAX**Function**

Plays a role in the mitochondrial apoptotic process. Under normal conditions, BAX is largely cytosolic via constant retrotranslocation from mitochondria to the cytosol mediated by BCL2L1/Bcl-xL, which avoids accumulation of toxic BAX levels at the mitochondrial outer membrane (MOM). Under stress conditions, undergoes a conformation change that causes translocation to the mitochondrion membrane, leading to the release of cytochrome c that then triggers apoptosis. Promotes activation of CASP3, and thereby apoptosis.

Cellular Location

[Isoform Alpha]: Mitochondrion outer membrane {ECO:0000250|UniProtKB:Q07812}; Single-pass membrane protein. Cytoplasm {ECO:0000250|UniProtKB:Q07812}. Nucleus {ECO:0000250|UniProtKB:Q07812}. Note=Colocalizes with 14-3-3 proteins in the cytoplasm. Under stress conditions, undergoes a conformation change that causes release from JNK-phosphorylated 14-3-3 proteins and translocation to the mitochondrion membrane (By similarity) {ECO:0000250|UniProtKB:Q07812} [Isoform Gamma]: Cytoplasm.
